

The Floating Trail has been closed due to structural issues found both above and below the waterline. Several 100-year storm events and annual freezing and thawing of the lake have taken their toll. Design of a replacement for the Floating Trail is underway and installation is expected to take place later this year.

In anticipation of the Floating Trail replacement project, a new connector trail was developed and installed last year that bypasses the Floating Trail. One end of the new "Green Trail Connector" is located on Smithville Road at the intersection of East and West Railroad Avenue. The trail parallels Smithville Road and rejoins the green trail (Lake Trail) near dock #2. We ask for your patience while this project is being implemented. Thank you.
